# DEVIN CENATIEMPO

dcenatiempo@gmail.com | linkedin.com/in/devincenatiempo | github.com/dcenatiempo

Staff Software Engineer and mobile architect with 7+ years shipping React Native + Expo apps to the App Store and Google Play. Currently leading BILL's AI-centric rewrite of its native iOS and Android apps into React Native — architecting agent skills, prompts, and MCP tooling so a small team ships what traditionally took a dozen engineers over a year, and building an in-app AI assistant with agent-driven, tool-use interaction. Owns features beyond the code: feature-flag rollouts (LaunchDarkly), observability and post-launch stability (Datadog), release engineering (Fastlane/Expo), performance, and availability. Promoted to Staff Engineer and retained as critical talent through a 30% company-wide reduction.

## EXPERIENCE

### BILL (acquired Divvy) — Draper, UT (remote)

*Staff Software Engineer (Fall 2025–Present) → Senior Software Engineer (Apr 2021–Fall 2025)*

- Lead AI-driven rewrite of BILL's native Android & iOS apps into React Native; architect agent skills, prompting workflows, and MCP tooling that enable a 3–5 person team to replace the output of a much larger traditional effort, with guardrails and quality checks built into the agent workflow
- Built an in-app AI assistant and MCP server enabling agent-driven app interaction and tool-use across the mobile app
- Built BILL's receipt capture flow — image input from the camera or photo gallery, OCR on the receipt, and matching to the corresponding transaction with auto-filled expense data
- Built a proof-of-concept duplicating 90%+ of the app's UI and navigation with mock data; presented the technical strategy to the CTO and secured executive buy-in
- Owned features end-to-end: managed feature-flag rollouts (LaunchDarkly) and observability (Datadog) to monitor stability and availability post-launch, maintained CI/CD and release tooling (Fastlane) across App Store and Play Store builds, and designed a backwards-compatible push notification system across platform versions
- Built and maintained the EAS build and OTA update pipeline — release flows, code signing, and the supporting code that deliver over-the-air updates to BILL's Expo-based React Native apps
- Built critical features in native Android app using Kotlin, Jetpack Compose, and Dagger Hilt
- Led the migration from react-native-navigation to React Navigation across BILL's mobile apps
- Refactored the entire React Native app to a modular clean architecture, improving maintainability and developer velocity across 6+ squads building on shared components
- Promoted to Staff Engineer and retained as critical talent through a 30% company-wide reduction

**Inside Real Estate — Draper, UT**

*Lead React-Native Developer (Jan 2019–Apr 2021) → Full Stack Software Engineer (Jul 2018–Jan 2019)*

- Drove app store rating from mid-2s to 4.4/5.0 across a dozen white-label app variants, owning release quality, stability, and store delivery across the fleet
- Implemented full push notification pipeline (Laravel + Firebase + React Native)
- Converted the legacy web application to fully mobile responsive using modern CSS
- Resolved bugs across a Vue frontend, Laravel backend, and MySQL/Redshift/Elasticsearch data stores

**FamilySearch.org — Lehi, UT**

*Front End Engineer Intern (Jan 2018–Apr 2018)*

- Built large-scale web applications using Polymer web components on an agile scrum team
- Collaborated with UX designers to bring responsive designs to life with HTML/CSS/JS

## SIDE PROJECTS

- farmgeni.us — Full-stack farm management app (Next.js, PostgreSQL, React Native, AI-SDK, Vercel)
- tandoor-cli — CLI tool bridging AI agents to the Tandoor recipe manager

## TECHNICAL SKILLS

- Mobile: React Native, Expo, TypeScript, TanStack Query, Reanimated, React Navigation, Expo Router, Jetpack Compose, Android SDK, Dagger Hilt, Maestro (E2E)
- AI: AI-SDK, MCP, Skills, Claude, Hermes, OpenCode
- Observability, Analytics & Experimentation: Sentry, Datadog, LaunchDarkly, Segment, Avo
- Languages: TypeScript, JavaScript, Kotlin, PHP, SQL, Node
- Web: Next.js, React, Node.js, AdonisJS, Laravel, Vue, GraphQL, REST
- Tooling: Fastlane, EAS, OTA updates, code signing, CI/CD, Git, Firebase, Drizzle, PostgreSQL, Vercel

## EDUCATION

- B.S. Software Engineering — Brigham Young University–Idaho (Online, 2016–2018) — GPA 3.6
- Front End & Data Visualization Certification — freeCodeCamp.org (2017)
